DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 4 and 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Lee et al. (6,844,604).

Lee et al. teach in figure 1C and related text a semiconductor device comprising:

a gate insulating film having a multilayer structure including a zirconium oxide film 20 (ZrO_2 , column 6, lines 51-54) and a high dielectric constant film 18 which is formed of an oxide of a metal other than zirconium and substantially directly contacting the zirconium oxide film, wherein the high dielectric constant film is a hafnium oxide film, and wherein the gate insulating film includes a zirconium silicate film 12 formed under the zirconium oxide film.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al. in view of Yang et al. (6,451,647).

Lee et al. teach substantially the entire claimed structure, as applied to claim 1 above, except a high dielectric constant film contains nitrogen. Yang et al. teach the high dielectric constant film (hafnium silicate layer) contains nitrogen (column 5, lines 19-23). It would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the teaching of Yang et al. into the device taught by Senzaki in order to provide better protection to the gate by increasing the dielectric constant of the high dielectric constant film.

Response to Arguments

Applicant's arguments with respect to claims 1, 3, 4 and 21 have been considered but are moot in view of the new ground(s) of rejection.
